International state of the art Event

Innovative Waste Management Solutions

PROMOTION OF PUBLIC PROCUREMENT OF INNOVATION FOR RESOURCE EFFICIENCY AND WASTE TREATMENT

The event will bring together public procurers, suppliers and consultants in the field of waste management from all over Europe to discuss procurement needs and showcase state of the art solutions for specific areas of waste management. There will be a special focus on:

- Plastic separation
- Bio-waste collection
- Bulky waste management

Why should you participate?

Good waste management depends heavily on the development of innovative solutions for collection and treatment. This is where public procurement comes in: it can act as a key instrument to galvanise the market in order to preserve and recycle material resources. Public procurers and international suppliers will have the possibility to speak directly about their procurement needs, upcoming tenders and *state of the art* solutions already available as well as those in development.

Who is this event for?

- Procurers from public entities responsible for the procurement of waste management solutions and interested in implementing innovative concepts
- **Suppliers** of solutions for any of the areas of interest mentioned that would like to showcase their products and services
- Experts in waste management from private companies, research institutions or public entities with a focus on waste management and an interest in the procurement of innovative waste management solutions

Participation in the event is free of charge, but **<u>early registration</u>** is required as places are limited.

26 April 2016 Bilbao

Location:

Bizkaia Aretoa, Abandoibarra Etorbidea, 3, 48009 Bilbao
